

## Solids MS1

Question Number	Answer	Mark
<b>1</b>	Use of $\sigma = \frac{F}{A}$ Use of cross sectional area = $\pi r^2$ <b>and</b> $d = 2r$ Diameter = $1.6 \times 10^{-3}$ m  <u>Example of calculation</u> $500 \times 10^6 \text{ Pa} = \frac{950 \text{ N}}{A}$ $A = 1.9 \times 10^{-6} \text{ m}^2$ Diameter = $\sqrt{\frac{4 \times (1.9 \times 10^{-6} \text{ m}^2)}{\pi}}$ Diameter = 0.00156 m	(1)  (1) (1)  (1)  (1)

Question Number	Answer	Mark
<b>2(a)</b>	Copper is malleable  Can be hammered/beaten/bent into shape	(1)  (1)
<b>2(b)</b>	Steel is stiff <b>Or</b> steel has a high Young modulus  Does not bend / deform  (If neither MP is scored then strong <b>Or</b> high UTS scores MP1 only)	(1)  (1)
	<b>Total for Question</b>	<b>4</b>

Question Number	Answer	Mark
3(a)(i)	Less compression / extension / $\Delta x$ ( <b>must be comparative</b> ) Driver / passenger less comfortable <b>Or</b> driver / passenger feels the shock <b>Or</b> car body not kept at the same level <b>Or</b> the drive is more bumpy.	(1)         (1) <b>2</b>
3(a)(ii)	Straight line starting from (0,0) above the original line   	(1) <b>1</b>
3(b)	Use of $F = k\Delta x$ $(\Delta)x = 0.316 - 0.205 (= 0.111 \text{ m})$ stated or implied (allow -ve here only) $k = 3.67 \times 10^4 \text{ N m}^{-1}$  <u>Example of calculation</u> $\Delta x = 0.316 \text{ m} - 0.205 \text{ m} = 0.111 \text{ m}$ $4.07 \times 10^3 \text{ N} = k \times 0.111 \text{ m}$ $k = 3.67 \times 10^4 \text{ N m}^{-1}$	(1) (1) (1) <b>3</b>
	<b>Total for Question</b>	<b>6</b>

Question Number	Answer	Mark
4(a)(i)	<p>The increase in extension is constant for a fixed increase in mass  <b>Or</b> mass is proportional to extension  <b>Or</b> extension is proportional to mass  <b>Or</b> graph is a rising/increasing straight line</p> <p>The wire obeys <u>Hooke's law</u></p>	<p>(1) (1) <b>2</b></p>
4(a)(ii)	<p>Use of area under the graph <b>Or</b> use of <math>\frac{1}{2} F\Delta x</math> (with <math>m</math> or <math>F</math>)</p> <p>Identify that the limit of proportionality is at <math>2.6 \pm 0.1</math> kg</p> <p>Elastic potential energy = 0.5 J            (accept 0.40 J to 0.50 J)</p> <p><u>Example of calculation</u>            Area under the graph = <math>\frac{1}{2} \times 3.5 \times 10^{-2} \text{ m} \times 2.6 \text{ kg} = 0.046 \text{ kg m}</math>            Area <math>\times g = 0.046 \text{ kg m} \times 9.81 \text{ N kg}^{-1}</math>            Elastic potential energy = 0.45 J</p>	<p>(1) (1) (1) <b>3</b></p>
4(a)(iii)	<p>The wire will experience a large (increase in) extension/strain for a small (increase in applied) force/stress/mass</p> <p>The wire will not return to its original length/shape (once the force is removed) <b>Or</b> the wire will be permanently deformed  <b>Or</b> the wire will exhibit plastic deformation/behaviour</p>	<p>(1) (1) <b>2</b></p>
4(b)(i)	<p>Thinner wire <b>Or</b> smaller CSA/ diameter/radius  <b>Or</b> longer wire  <b>Or</b> wire with a lower stiffness/<math>k</math>/spring constant  <b>Or</b> wire that is more ductile <b>Or</b> wire with a lower Young modulus            (comments must be comparative)</p>	<p>(1) <b>1</b></p>
4(b)(ii)	<p><b>Max 2</b>            Use a pointer on the wire/masses</p> <p>Sensible suggestion to reduce parallax            e.g. read at eye level <b>Or</b> place the rule as near as possible to the mass/wire</p> <p>Use a set square to ensure rule is vertical</p> <p>Wait for the extension to finish</p> <p>Add masses gently</p>	<p>(1) (1) (1) (1) (1) <b>2</b></p>
